Read in these entrancing pages how Russia has for years craftily been trying to escape from her darkness—to get a year-round open port, with its economic freedom. Read how Germany and Austria, fearful of the monster's latent strength, have been trying to checkmate her and how they have pinned all in this last, supreme stake.

DRY AND WET COMPARTMENTS

Molting in Incubator Tends to Increase Hatch of Eggs—Also Adds to Weight of Chick.

A test made in April, 1914, by the New Jersey experiment station to determine the efficiency of a 300-egg capacity incubator gave a percentage of hatch of fertile eggs of 77.4 and a percentage in July of 85. Comparing compartments run dry with those run wet it was observed that the latter gave a much higher percentage of hatch as well as an increase in the weight of the chicks, the average weight for the dry being 1.2 ounces, and for the wet 1.25 ounces.

Four brooders of 100 week-old chicks each were fed for nine weeks, two lots receiving a regular chick ration and two other lots receiving in addition all the sour milk they would consume.

The first two brooders made a total gain of 43.62 pounds and 42.35 pounds and the mortality was seventy-one and seventy-three respectively, while the last two brooders made a total gain of 52.22 and 51.94 pounds and the mortality was twenty-eight and twenty-eight, respectively. It was found to require 3.6 quarts of skim milk to produce a pound of body weight.

It is stated that the skim-milk-fed chicks represented a more uniform flock than those not so fed. It has been concluded that skim milk has the power to kill the organisms which cause many poultry diseases, the bacilli being destroyed by the dilute acid of the sour milk.

DURABLE COOP FOR CHICKENS

Illustration Gives Outline of Sanitary Pen for Confining Chicks—Simple in Construction.

This drawing shows the plan of chicken coop we designed and have been using the last ten years. The coops are made in the winter time when the men are not busy with other work. They are made of 12 and 6-inch soft pine boards. They are 23 inches long, 18 inches wide, 18 inches high in

front and a foot high at the back. The roof extends over the side walls about 3 inches on all sides, writes Mrs. S. M. Pophart, in Farmers Mail and Breeze. The floors are hinged on as shown and the coops are painted inside and out. Wire screen is put in the ends as shown, to provide ventilation. The little side door permits chicks to come and go. The material in each coop costs about \$1. We use the coops from year to year as they are cleaned out every fall and put away in the dry during the winter. I have never yet lost a chicken in these coops, either by drowning, smothering or through having some animal get in.

FILLERS FOR EGG CARRIERS

Shocks Incident to Shipping and Handling of Fragile Articles Will Not Cause Breakage.

The Scientific American in illustrating and describing a filler for egg cases, invented by C. P. Daly of New York, says:

This invention relates to fillers for egg cases or carriers and more particularly to an improved double-walled filler of such construction that shocks

Improving the Flock.

Raise a few more pullets than you will want for layers, then you will have a chance to pick out the best and sell the culls. In this way you will improve the flock.
